

# VAT Engine v19.7.1

---

Release Note

## Overview

This release is a patch release for the VAT Engine application for July 2019.

## Main changes in the VAT Engine

The following improvements have been made to the VAT Engine: the Belgian clients can now choose in which official language (i.e. the French or Dutch) they want to have responses from the VAT Engine, including the references on their invoices.

## Change Log

Ref	Description
VEN-376	A new tag was added in the Input XML: <InvoiceLanguage>, consequently a Customer can choose the Language ID of the Official Language of their Country in which they want an XML response. This means that users can choose a language for their invoice references by giving the Language ID in this new tag of the input XML. In other words, by changing the indicator in <invoiceLanguage> tag in the input XML, the language of the invoice references changes accordingly in the output file.

## Need Help?

If you need technical assistance, please contact Customer Support via the on-line submission form:
