VAT Reporting v18.7.2

Release Note

Overview

This release is a patch of the 18.7.1 release of the VAT Reporting application. It is to address a performance issue which was introduced in the 18.7.1 release.

Change Log

Ref	Description
VR-4588	Errors & Warnings – We identified an issue with the performance of the Errors & Warnings screen in the 18.7.1 release. If the system has a large number of documents in Errors & Warnings the screen would freeze or take a very long time to load, we have made changes to improve the performance of this screen. Note: While investigating this issue with customers we found that some customers were not clearing their Errors and Warnings on a daily basis. This is bad practice and we recommend that all Errors are reviewed and resolved; once you are working with tens of thousands of errors it is very likely that items which need to be resolved will be missed by the user and result in incorrect filings. Database Updates for this change will take some time to complete.

Database Updates

Number	Description
780	Added index Ix_Documents_UUID to the Documents table
781	Added index Ix_ErrorLog_ErrorScreenShow to the Error Log table

Upgrade Procedure

This section provides details on how to update to the latest version. For the purposes of this documentation, we assume that you have an existing installation and you have the necessary access privilege to perform the upgrade.

Download

The latest version of VAT Reporting is available here:

https://release.vat.avalara.net/VATReporting.html

Database Back Up

Close all running VAT Reporting windows, and take a full backup of the SQL Database. This can be done in the **SQL Server Management Studio**, from the database right-click menu **Tasks > Back Up.**

Stop Inbox Monitor & SII Processor Scheduled Task

Before installing the update of VAT Reporting stop the Inbox Monitoring Service and check there are no RCCL.exe processes still running, and stop the Windows Scheduled Task if you are using SII.

Install

Run the installer exe, once it completes open VAT Reporting and wait while it automatically handles any database upgrade.

Start Inbox Monitor

Start the Windows service, and then in VAT Reporting use the File > Send test file… and confirm the inbox is up and processing.

Start SII Processor Scheduled Task

Re-enable the Windows Scheduled Task (if you are using SII).

VAT Reporting is now ready for use!

Need Help?
